

# Shivam Dubey

Machine Learning Engineer

+91-9695863432 | [shivamsureshdubey8206@gmail.com](mailto:shivamsureshdubey8206@gmail.com) | [LinkedIn](#) | [GitHub](#)

*B.Tech CSE student building a foundation in Data Science & Machine Learning, with practical web development skills and hands-on experience designing, building, and deploying real-world projects end-to-end.*

## EDUCATION

|                                                                                                |                                         |
|------------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>Quantum University</b><br><i>Bachelor of Technology in Computer Science and Engineering</i> | 2024 – 2028 (Expected)<br>CGPA: 7.65/10 |
| <b>Class XII – CBSE</b><br><i>Higher Secondary Education</i>                                   | 66.2%                                   |
| <b>Class X – CBSE</b><br><i>Secondary Education</i>                                            | 89.4%                                   |

## TECHNICAL SKILLS

**Languages:** Python, Java, SQL (MySQL)  
**Skills:** Data Science, Artificial Intelligence, Machine Learning, Data Preprocessing, Feature Engineering, MySQL  
**Tools & Platforms:** Jupyter Notebook, VS Code, Google Colab, MySQL Workbench, Git, GitHub  
**Database:** MySQL

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| <b>Aether AI Pvt. Ltd., Gurugram</b><br><i>AI Intern</i>                                                                                                                                                                                                                                                                                                                                                                           | June 2025 – Sep 2025<br><a href="#">Certificate</a> |
| <ul style="list-style-type: none"><li>Developed a full-stack AI chatbot application using React, Next.js, and CSS, implementing a real-time chat interface with smooth conversational flow and sub-second response times.</li><li>Integrated prompt-based conversational AI, enabling the chatbot to process natural language queries (e.g., real-time weather lookups) and return context-aware, intelligent responses.</li></ul> |                                                     |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                               |

| <b>Car Price Prediction System</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="#">Live</a>   <a href="#">GitHub</a> |
| <ul style="list-style-type: none"><li>Built an end-to-end ML pipeline in Python/scikit-learn — data cleaning, missing-value imputation, and feature engineering on a real-world Kaggle automotive dataset; trained and optimized a Ridge Regression model (L2 regularization) to reduce multicollinearity across key features (brand, year, fuel type, mileage), achieving <math>R^2 = 0.76</math> on unseen test data.</li><li>Deployed a full-stack Flask REST API on Render with auto-retraining logic and GitHub version control, delivering real-time price predictions via a responsive UI.</li></ul>                                                                    |                                               |
| <b>Loan Default Prediction System</b>   <i>Python, LightGBM, SHAP, MLflow, Flask, Render</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="#">Live</a>   <a href="#">GitHub</a> |
| <ul style="list-style-type: none"><li>Performed data preprocessing and engineered 180+ features from a 300K+ record loan applicant dataset across 6 relational tables (credit bureau, prior applications, payment history), then trained a <b>LightGBM</b> classification model using <b>Stratified K-Fold cross-validation</b> and <b>Optuna</b> hyperparameter tuning, achieving <b>78.5% AUC-ROC</b>.</li><li>Conducted model evaluation and explainability analysis using <b>SHAP</b>, tracked experiments with <b>MLflow</b>, and deployed the model as a real-time <b>REST API</b> using <b>Flask</b> and <b>Render</b> for live loan default risk prediction.</li></ul> |                                               |

## ACHIEVEMENTS

- HackIndia 2025** – National-level hackathon; contributed as a team member to build a deepfake detection system, working on detection logic for manipulated media (Cybersecurity/Digital Safety track). Competed with 50+ teams and secured 5th rank.
- QHackathon 2026** – National-level hackathon; contributed as a team member to build “Skill-Exchanger”, a social connectivity platform for peer-to-peer skill sharing. Competed with 76+ teams and ranked in top 10.

## CERTIFICATIONS

- Data Science, Machine Learning, Deep Learning & NLP (40+ hours)** – Udemy | [Certificate](#)
- Python for Software Engineering (41 hours)** – Udemy | [Certificate](#)
